

Industry Bulletin – Revised ENMAX Metering Standard Effective July 1, 2026

Reliable and timely electrical service is critical to keep construction projects on schedule. In fall 2025, we shared our revised **Metering Standard** to gather feedback and help our customers and industry partners prepare for the upcoming changes.

Since then, we've worked with customers and contractors to answer questions, gather feedback, and clarify the requirements to make the standards easier to understand.

As of July 1, 2026, the revised ENMAX Metering Standard is now in effect.

You can find the full updated ENMAX Metering Standard, along with a summary of changes, on our website here:

[Standards and regulations](#)

We encourage you to review the revised standard to ensure you are familiar with the updated requirements. If you have any further questions or require additional clarification, please contact rmplanner@enmax.com.

Thank you again for your continued support and collaboration as we work to improve the consistency and reliability of metering practices across Alberta.
