Introduction

BILD Calgary Region (BILD) in partnership with Altus Group is pleased to present this overview of the Calgary single-family new home market which is produced on a monthly basis. Single-family includes detached, duplex (semi-detached) and row townhouse (fee simple) built forms. Our objective is to deliver insights on market sales, inventory and price activity and construction trends to assist BILD and its members with market trends and knowledge, and policy discussions with government.

Through our partnership, and by providing market trend data that promotes complete perspective on the New Housing Market in Calgary, we can:

- Support the Calgary new home builders and BILD with key market metrics to enable informed decision-making and promote awareness about the new home industry in Calgary
- Expand knowledge of single-family supply, sales, inventory and price trends
- Increase market transparency that benefits all

This monthly report is made possible by the cooperation and contribution of data from many of the top builder companies in Calgary. These builder companies combined represent over 90% of the single-family new home activity in Calgary and we will grow that number as more builder companies become data partners. If you are a single-family new home builder in Calgary and wish to become a data partner and receive the benefits that go along with that please contact Beverly Jarvis, Director of Policy, Projects & Government Relations at BILD Calgary Region at beverly.jarvis@bildcr.com.

Current Participating Builders

- Baywest Homes
- Broadview Homes
- Brookfield Residential
- Calbridge Homes

- Prominent Homes Ltd.
- Shane Homes
- Sterling Homes/Pacesetter by Sterling (Calgary)
- Trico Homes

Note:Beginning in Oct 2020 Stepper Homes was no longer a participating builder

Highlights – Mar. 2021

Important Updates About the Report

- New participating builders were added for January 2019. As such, the chart data as of January 2019 includes data from all previous participating builders **plus the new builders that were added**. Furthermore, the chart data from May 2018 to December 2018 has been amended slightly to include data from some of the new participating builders. *(Update – Jan. 2019)*

- New builder participants were added for May 2019. The sales and average sold price data as of January 2019 has been amended to include sales from all previous participating builders **plus the new builders that were added**. Therefore, the data for sales and average sold price from January 2019 and on is based on a consistent group of participating builders. *(Update – May 2019)*

Highlights (based on data reported by all builder participants)

- For a second consecutive month, the Calgary single-family market recorded its highest sales output since Altus Group began tracking in 2018. Total sales are up 208% year over year in Calgary, as the province marks the first anniversary of the COVID-19 pandemic. All tracked submarkets recorded historically high outputs with the largest increases seen in the Northwest, Established West, Westend, and South Inner-city with total sales up 825% from the same time last year. Moreover, the Northwest, Established West, Westend, and South Inner-city recorded 75 sales over the previous six months, only one more than the total recorded in March. While current elevated market activity has been primarily linked to first-time buyers, numerous sales in more sought-after areas also highlight the presence of more established buyers.

- In March, Pre-Construction sales and Spec Home sales both reached record monthly highs since tracking began. Pre-Construction sales achieved the largest increase, rising by 293% year over year. Continuing the trend of setting record highs, all three home types total sales rose by at least 114% from March 2020. In response to the sales activity, total construction starts rose 65% from February and will likely remain elevated to keep up with demand.

- Pricing across all home types increased for a third consecutive month and Attached Housing reached its highest value since tracking began. Four of the five tracked submarkets saw average prices decline in March likely because the market share of generally more expensive Front Drive homes is on the decline. Despite recent price declines, future increases are expected as the supply of lots to be brought to market and completed inventory continue to remain at historically low levels.

Submarket Comparison – Mar. 2021

Table shows a comparison of new single-family Total Sales, Spec Sales, Total Available Lot Inventory, Completed Home Inventory, Construction Starts, Overall Average Selling Price and Median Average Selling Price for the month and by Altus Group defined submarkets within Calgary (based on data reported by participating builders).

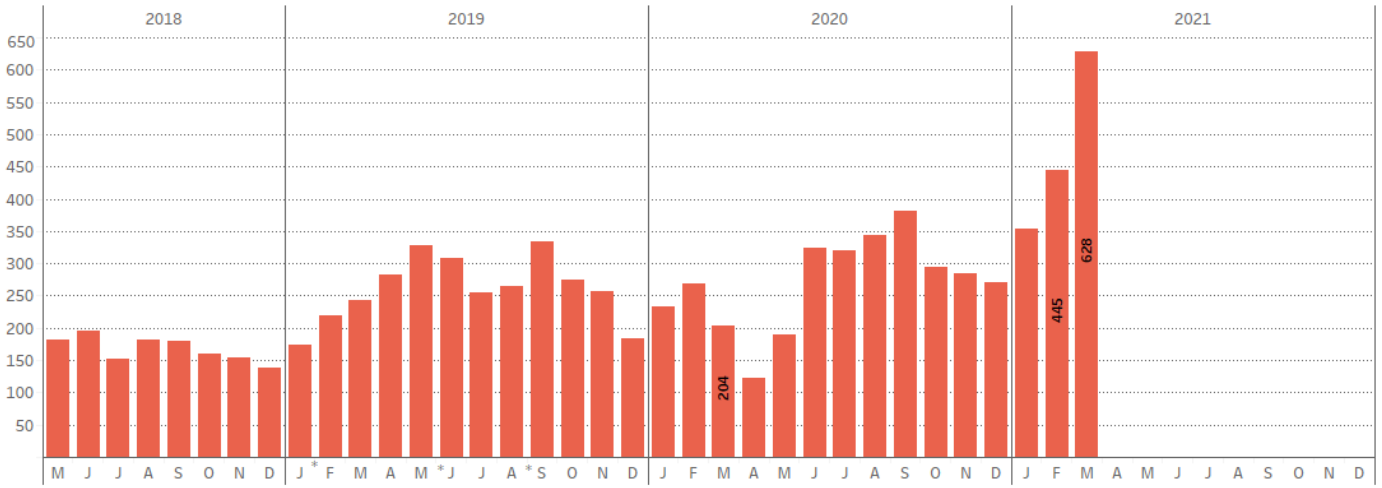
	March 2021						
Submarket (group)	Total Sales (incl. Spec)	Spec Home Sales	Available Lots (Unsold)	Completed Home Inventory (Unsold)	Construction Starts	Overall Average Selling Price	Median Average Selling Price
Northwest, Established West, Westend, South Inner City	74	6	179	7	8	$690,739	$764,166
North Centre	117	27	90	21	94	$523,003	$543,772
Northeast	145	35	522	29	75	$520,926	$511,347
Southeast	156	38	323	10	116	$542,565	$548,330
Southwest	136	25	523	34	59	$481,385	$509,615
Grand Total	628	131	1,637	101	352	$538,135	$543,772

Note: Due to few projects being reported in the Northwest, Established West, Westend and South Inner City submarkets, these submarkets have been grouped together.

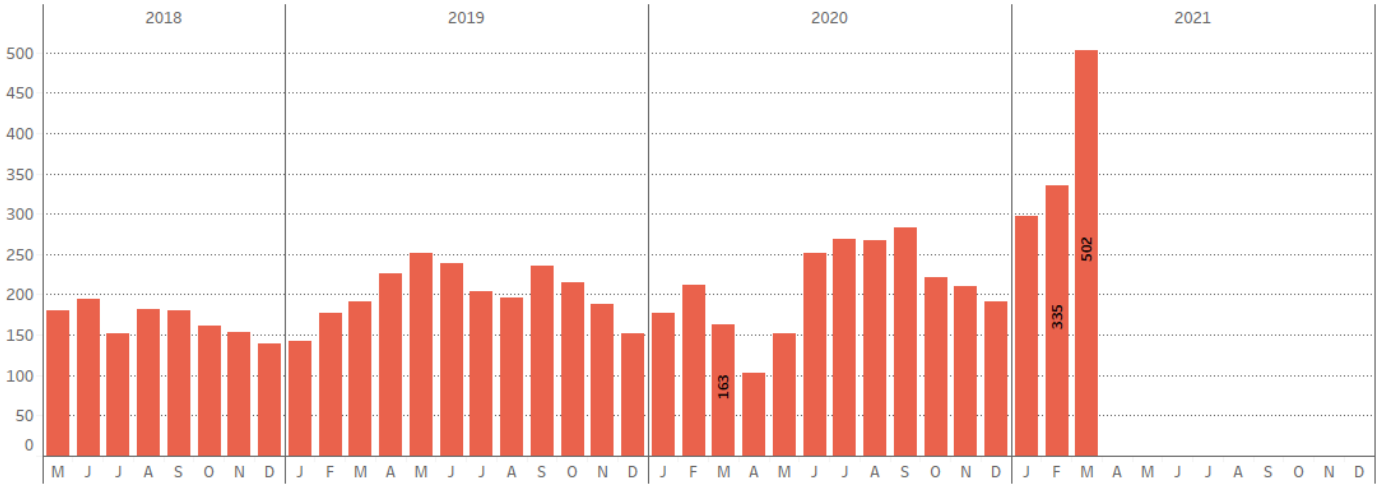
Total Monthly Sales

Chart represents the total number of firm sales achieved in each month regardless of construction status (based on data reported by participating builders).

All Participating Builders



Original Participating Builders

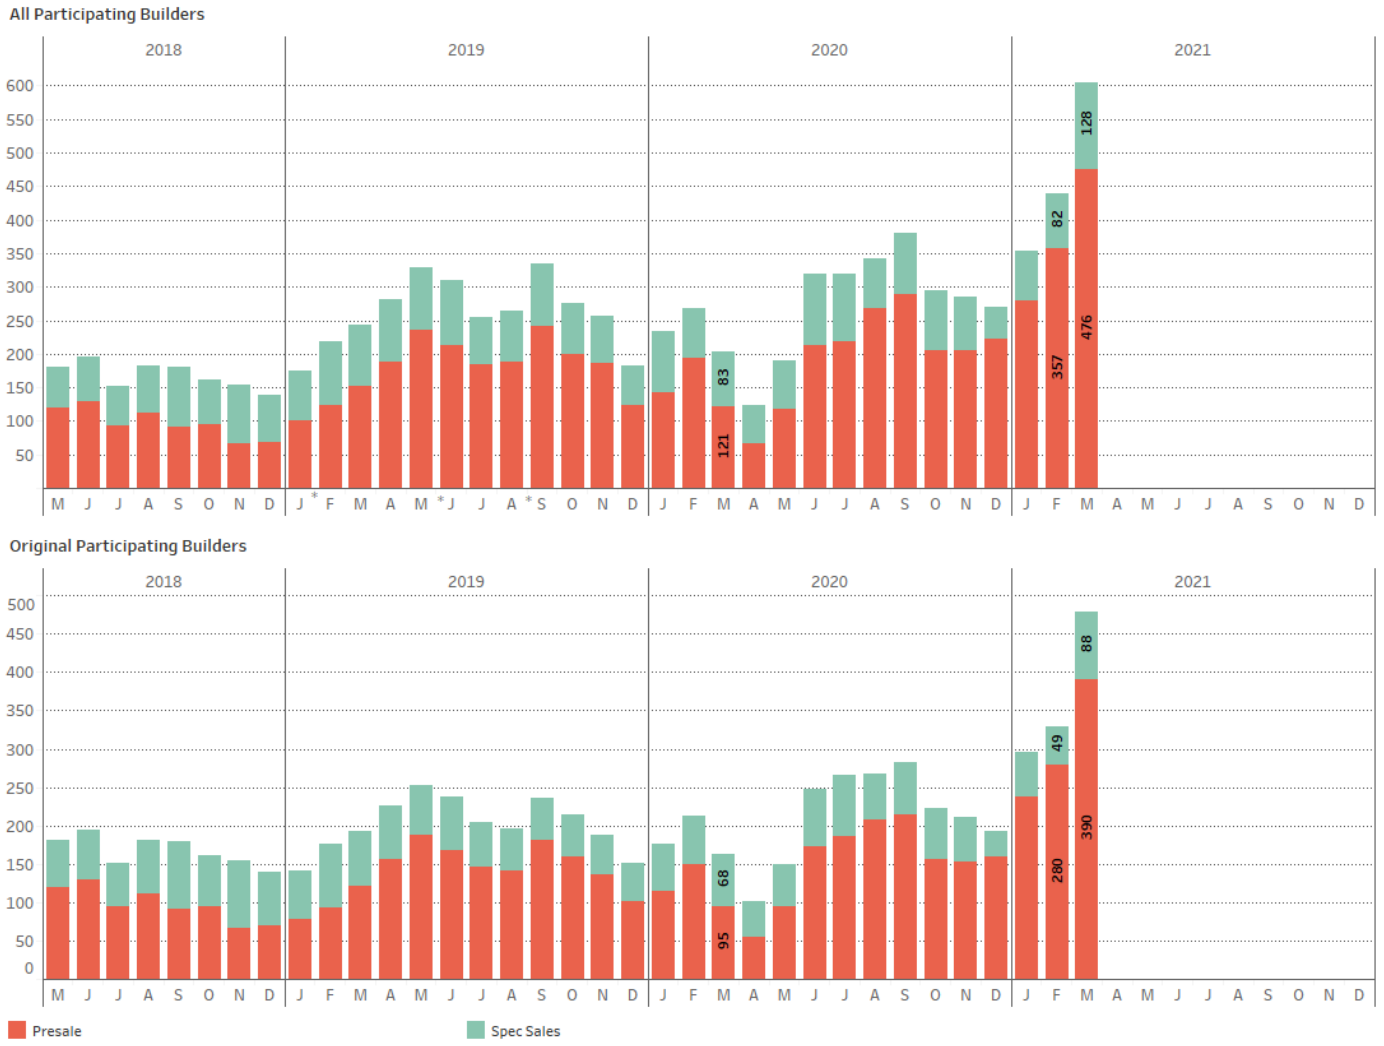


** New builder(s) added.*

Note: data may include revisions to previously reported numbers.

Pre-Construction Sales vs Spec Home Sales

Chart represents the total number of firm sales achieved in each month broken down by pre-construction sales and spec home sales (based on data reported by participating builders).

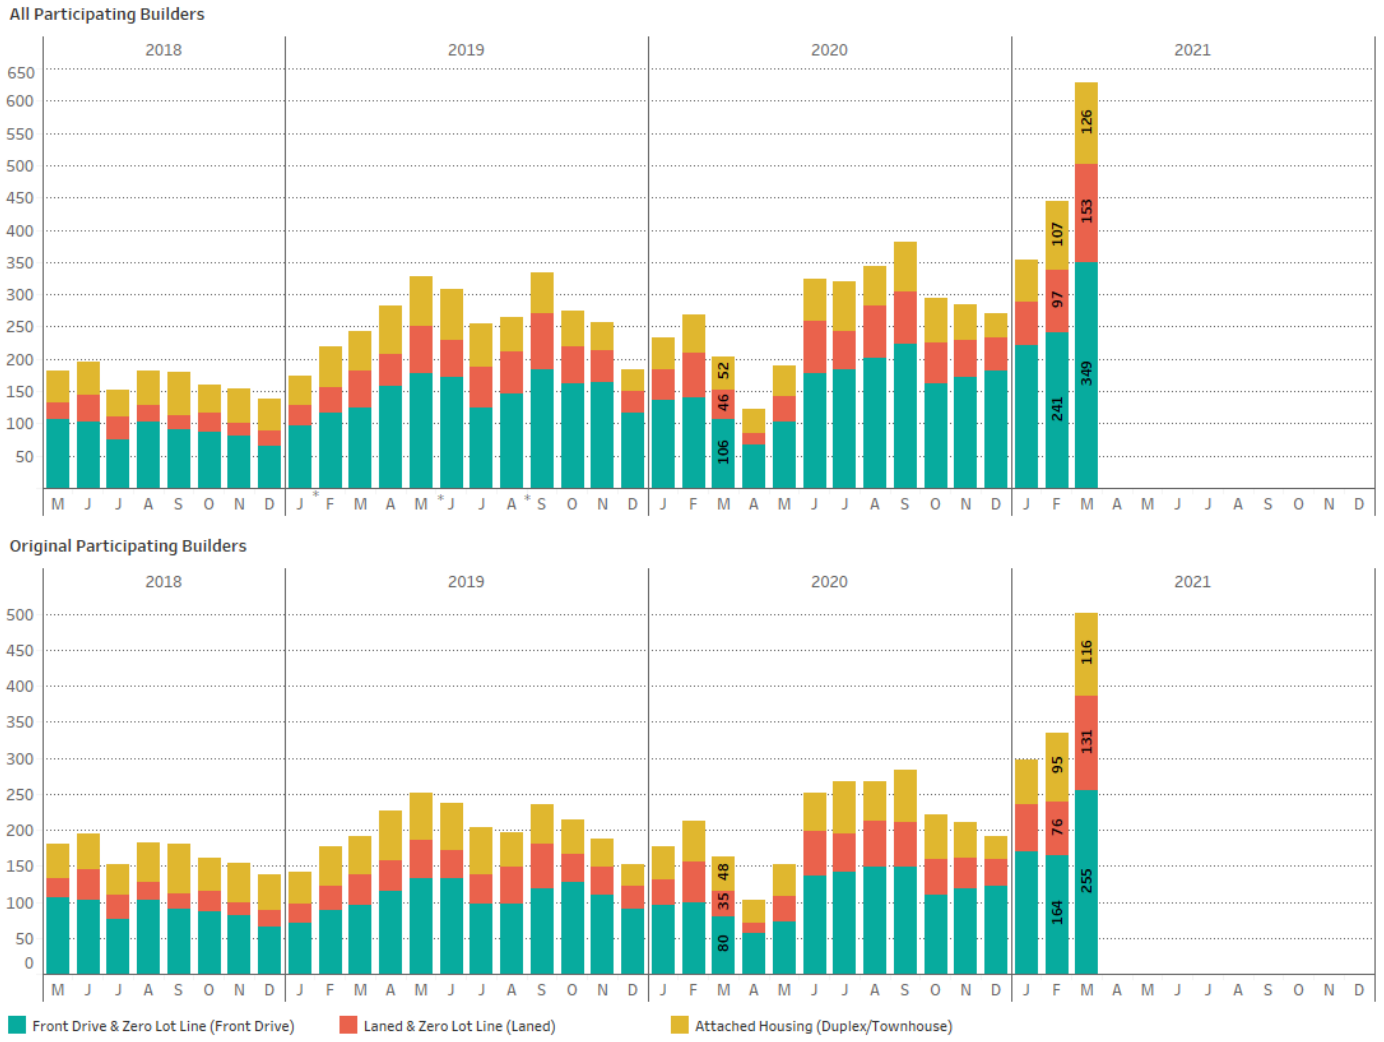


** New builder(s) added.*

Note: data may include revisions to previously reported numbers.

Monthly Sales by Lot/Home Type

Chart represents the total number of firm sales achieved in each month broken down by lot/home type (based on data reported by participating builders).

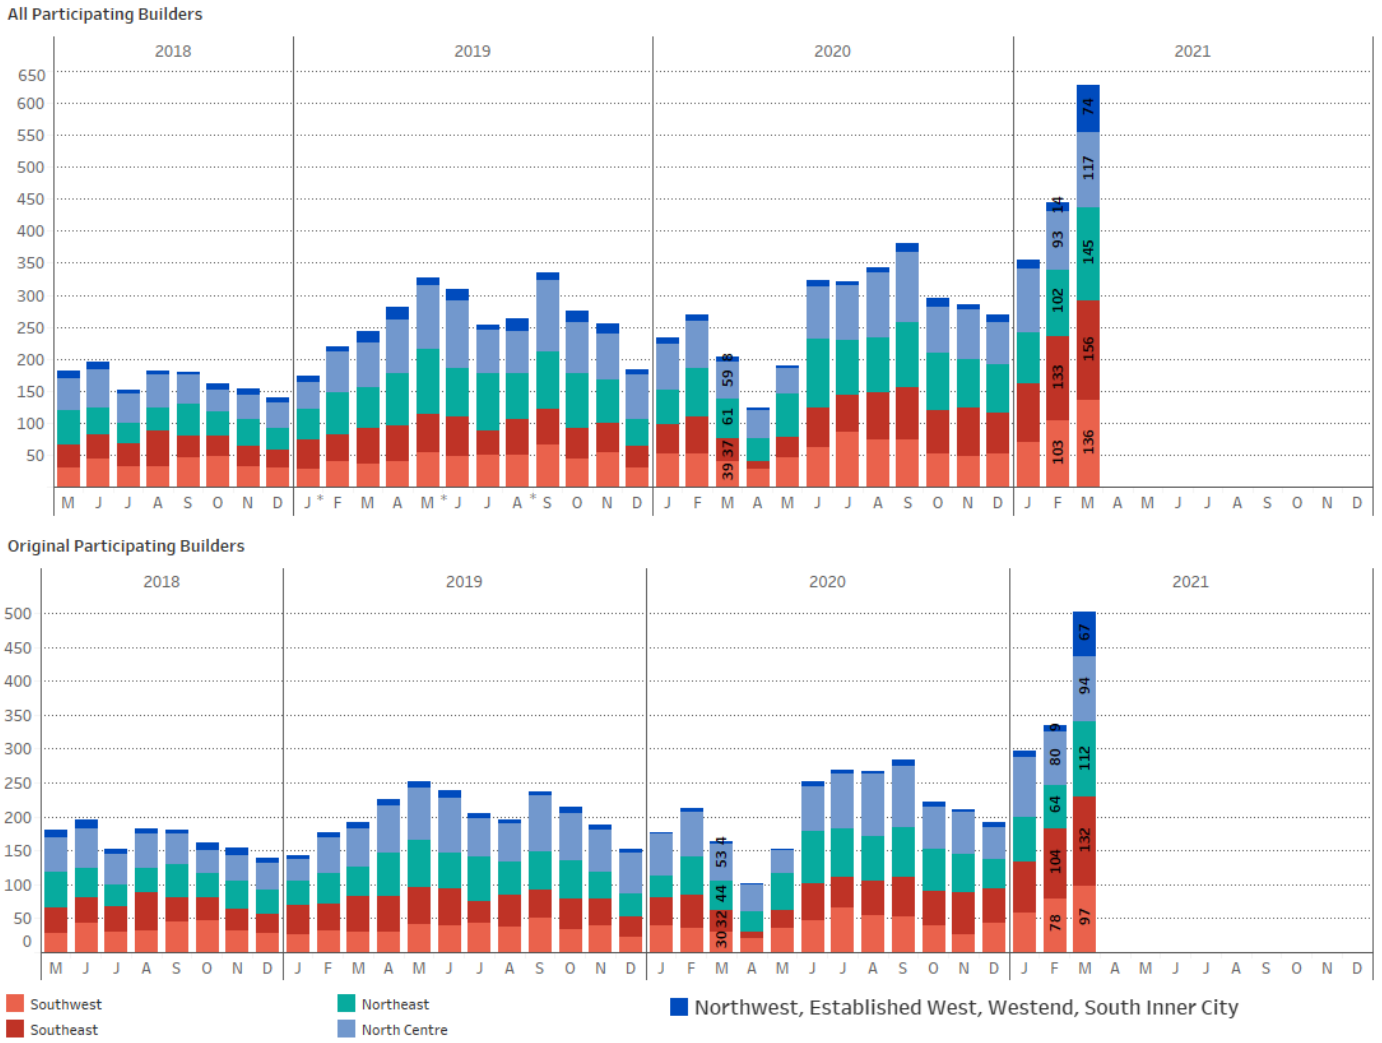


** New builder(s) added.*

Note: data may include revisions to previously reported numbers.

Monthly Sales by Submarket

Chart represents the total number of firm sales achieved in each month broken down by submarket (based on data reported by participating builders).

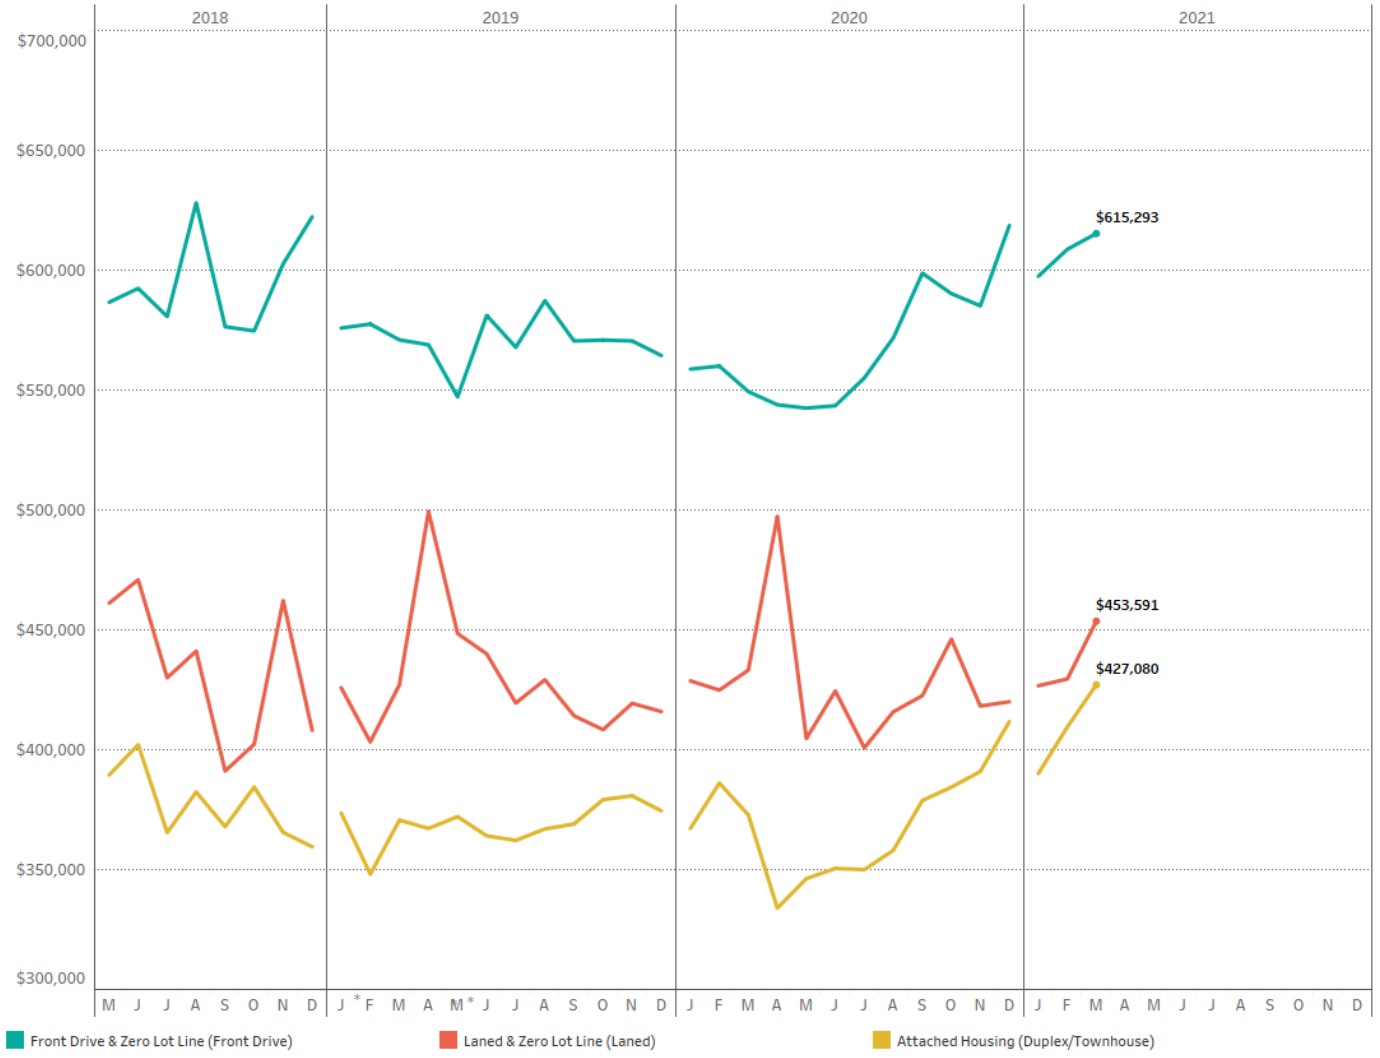


Notes: data may include revisions to previously reported numbers. Due to few projects being reported in the Northwest, Established West, Westend and South Inner City submarkets, these submarkets have been grouped together.

** New builder(s) added.*

Average Selling/Contract Price by Lot/Home Type

Chart represents the average price (incl. house, options, lot and GST) of homes sold in each month broken down by lot/home type (based on data reported by participating builders).

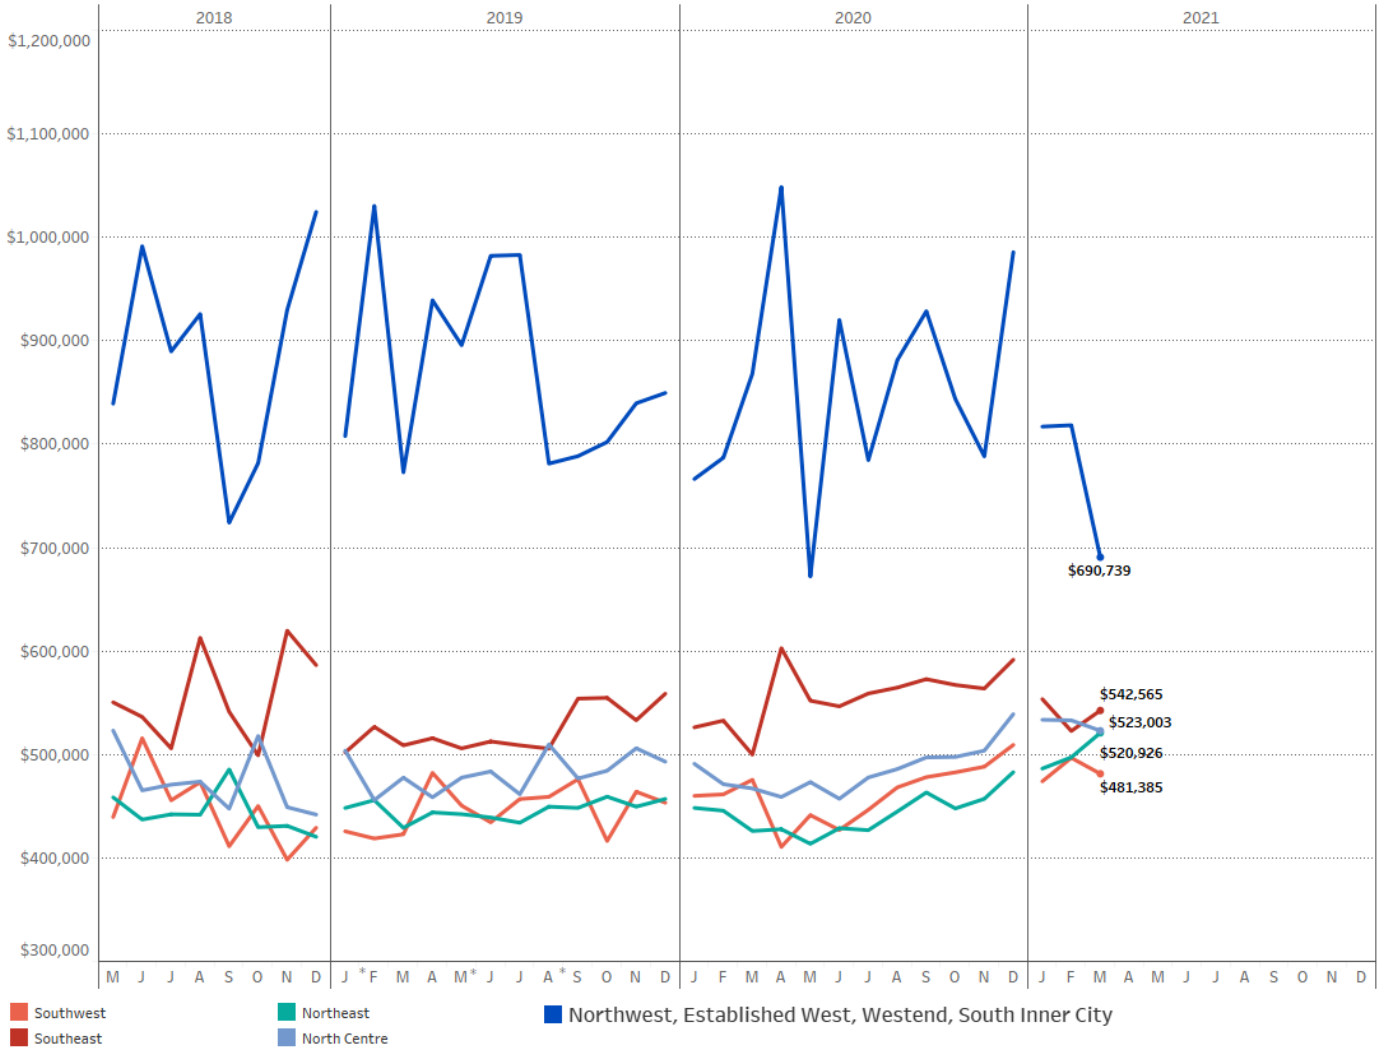


** New builder(s) added.*

Note: data may include revisions to previously reported numbers.

Average Selling/Contract Price by Submarket

Chart represents the average price (incl. house, options, lot and GST) of homes sold in each month broken down by submarket (based on data reported by participating builders).

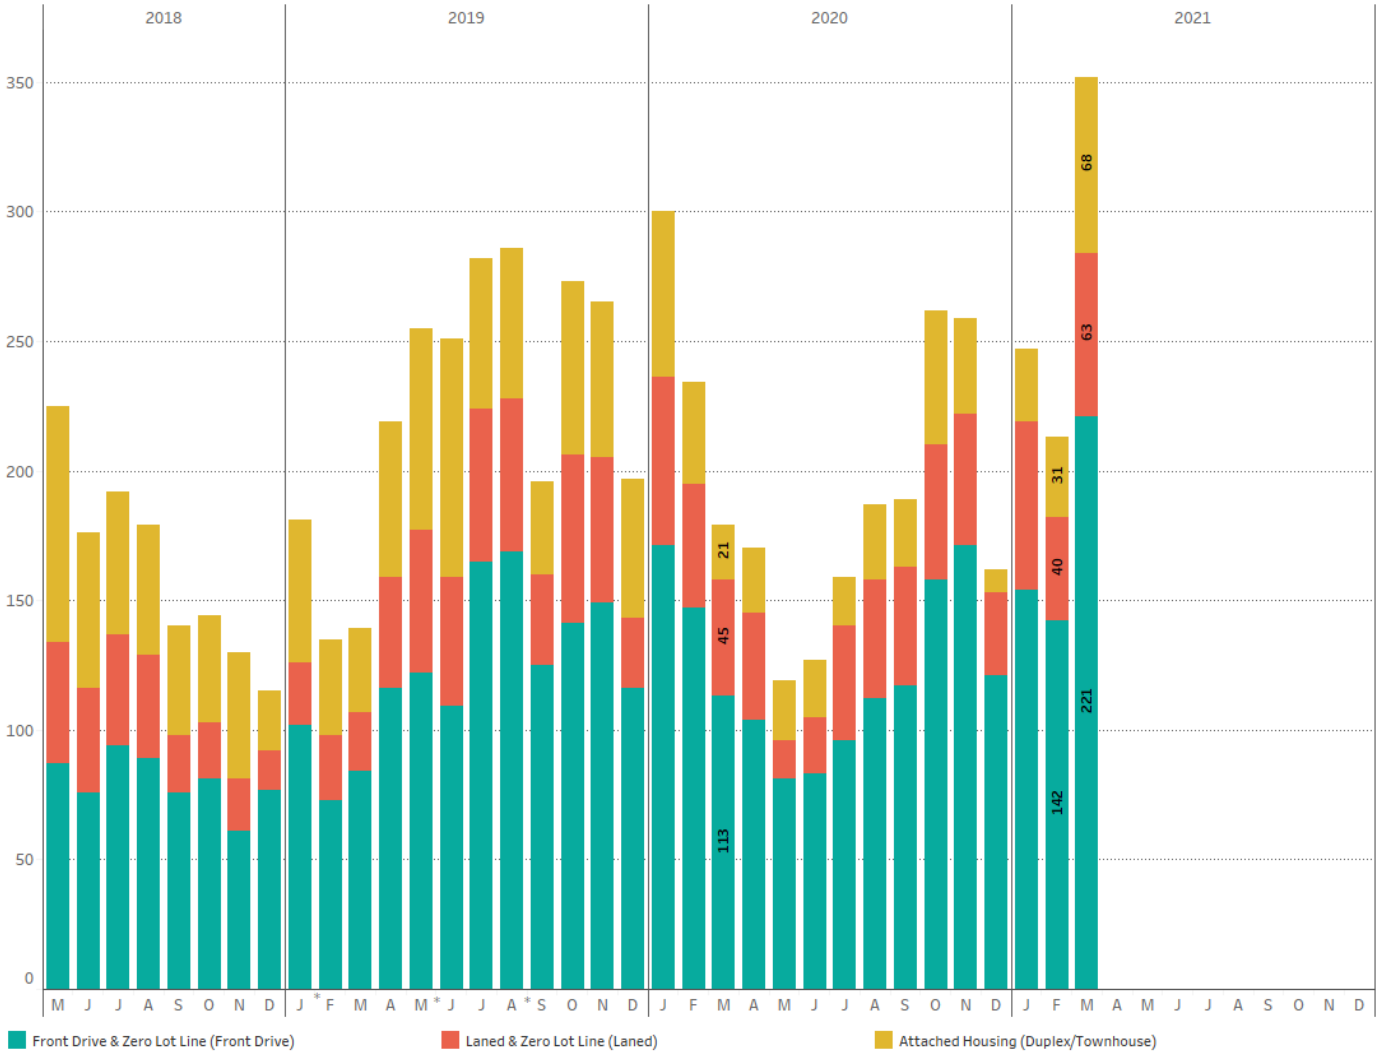


Notes: data may include revisions to previously reported numbers. Due to few projects being reported in the Northwest, Established West, Westend and South Inner City submarkets, these submarkets have been grouped together.

** New builder(s) added.*

Monthly Construction Starts by Lot/Home Type

Chart represents number of single-family starts (i.e. foundations poured) in each month broken down by lot/home type (based on data reported by participating builders).

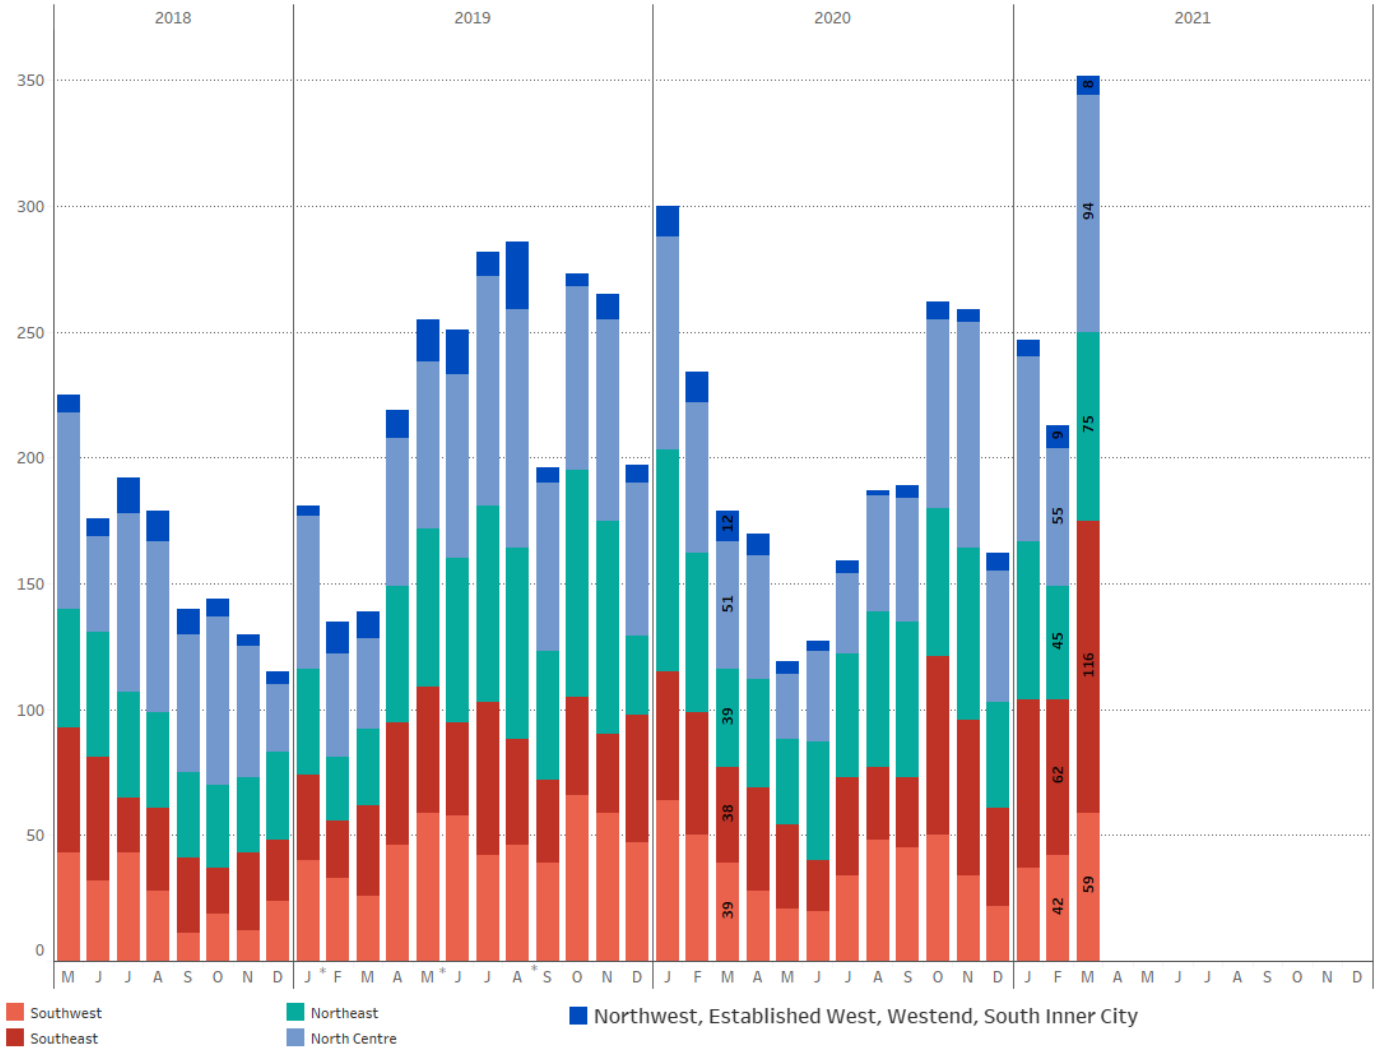


** New builder(s) added.*

Note: data may include revisions to previously reported numbers.

Monthly Construction Starts by Submarket

Chart represents number of single-family starts (i.e. foundations poured) in each month broken down by submarket (based on data reported by participating builders).

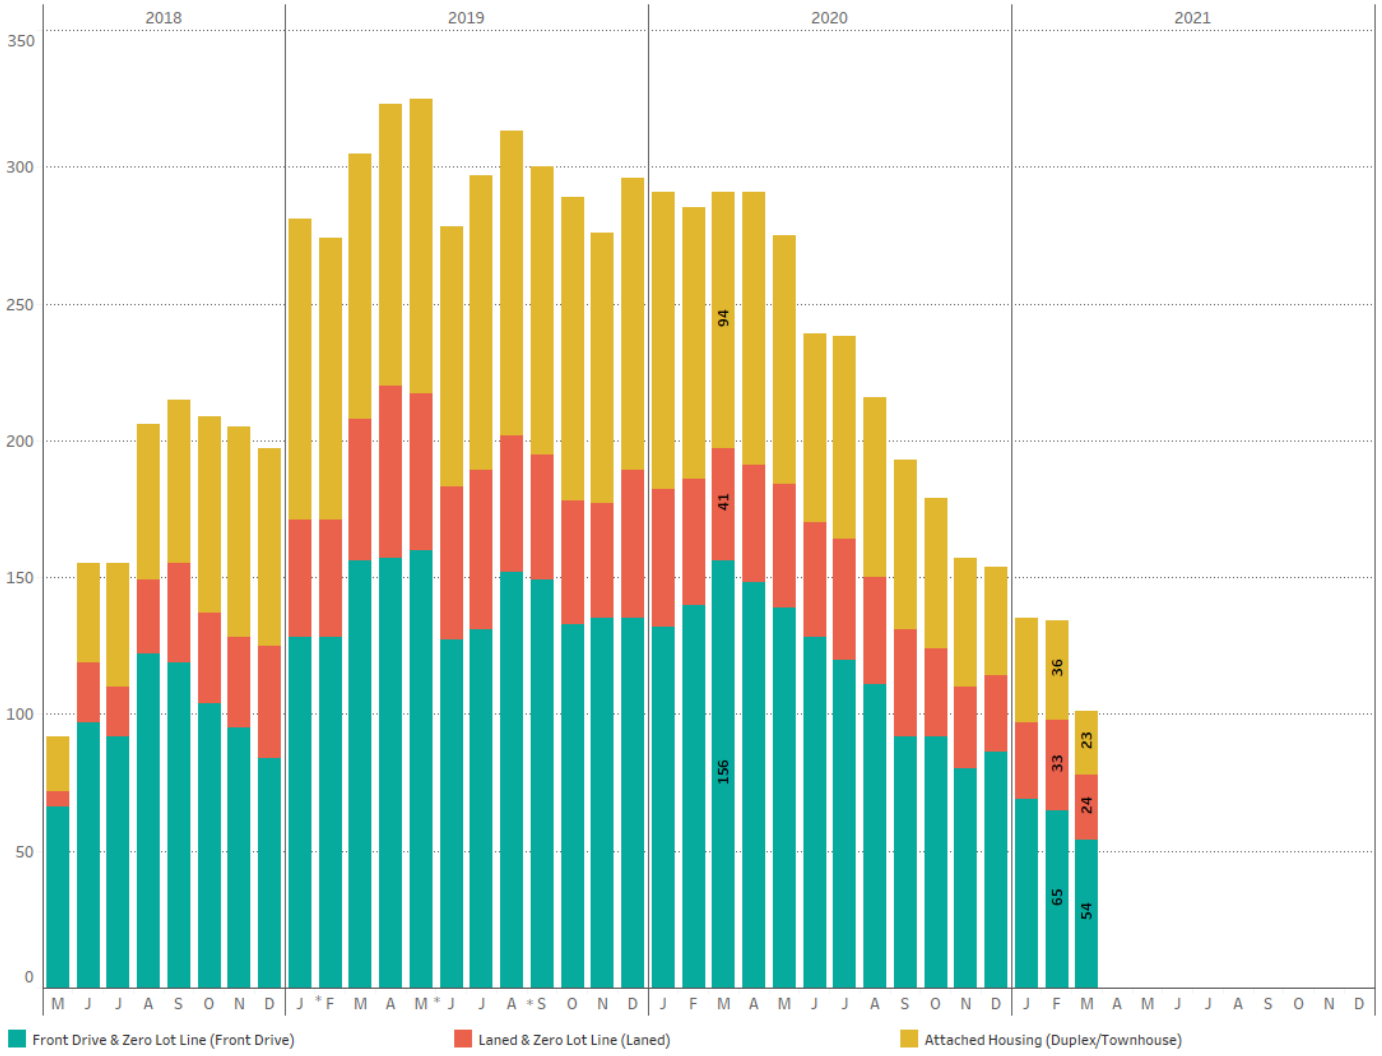


Notes: data may include revisions to previously reported numbers. Due to few projects being reported in the Northwest, Established West, Westend and South Inner City submarkets, these submarkets have been grouped together.

** New builder(s) added.*

Completed Home Inventory by Lot/Home Type

Chart represents number of finished homes available for sale with immediate occupancy in each month broken down by lot/home type (based on data reported by participating builders).

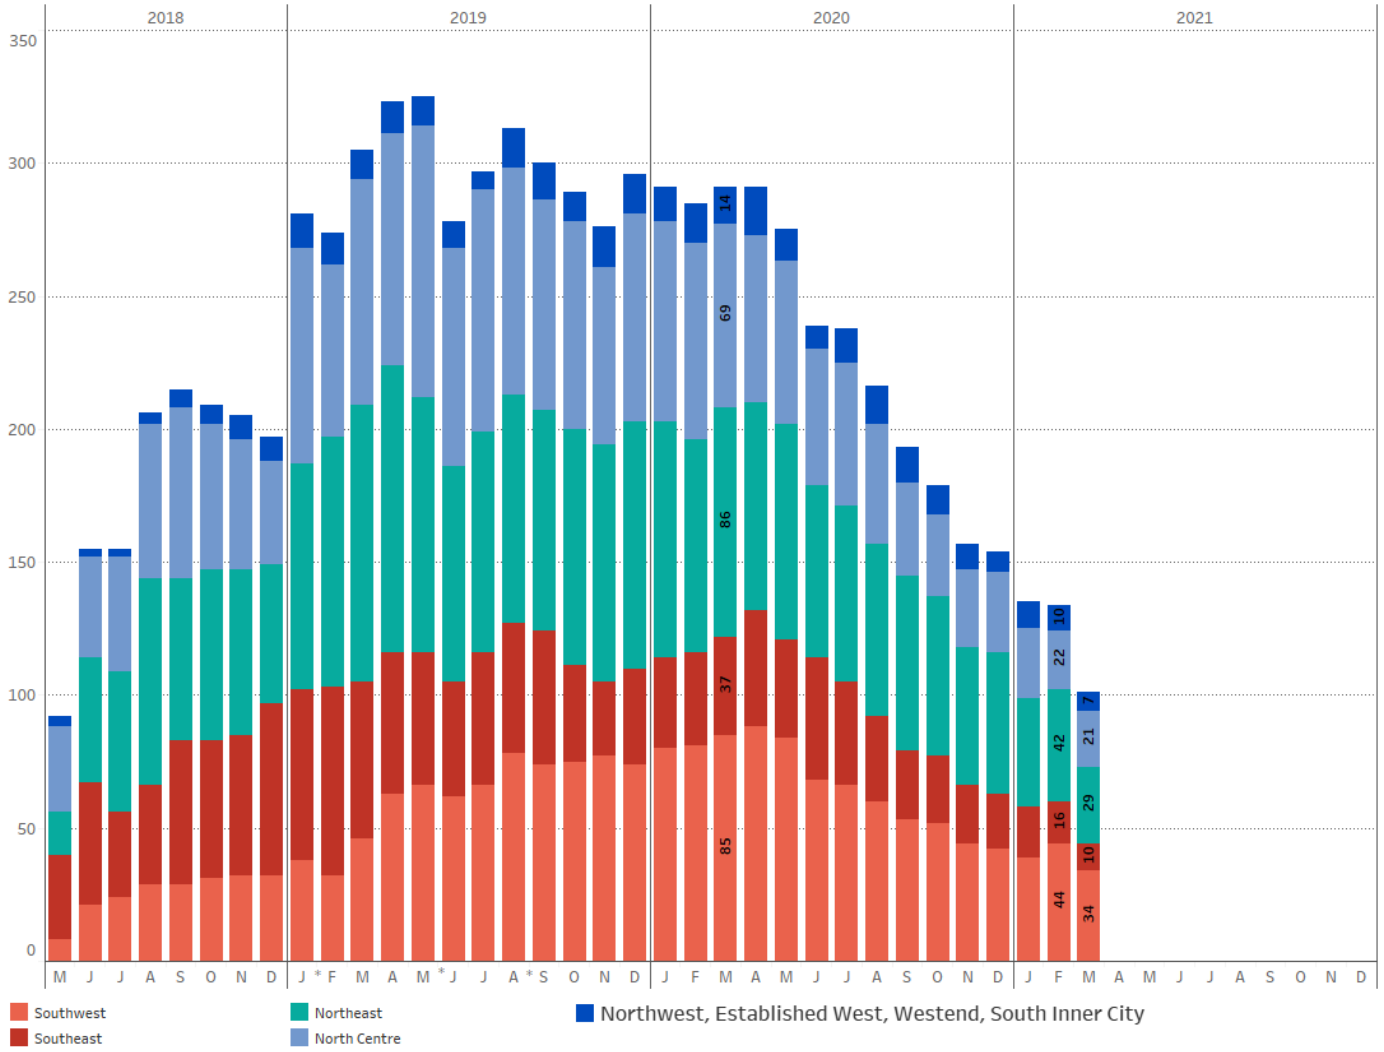


** New builder(s) added.*

Note: data may include revisions to previously reported numbers.

Completed Home Inventory by Submarket

Chart represents number of finished homes available for sale with immediate occupancy in each month broken down by submarket (based on data reported by participating builders).

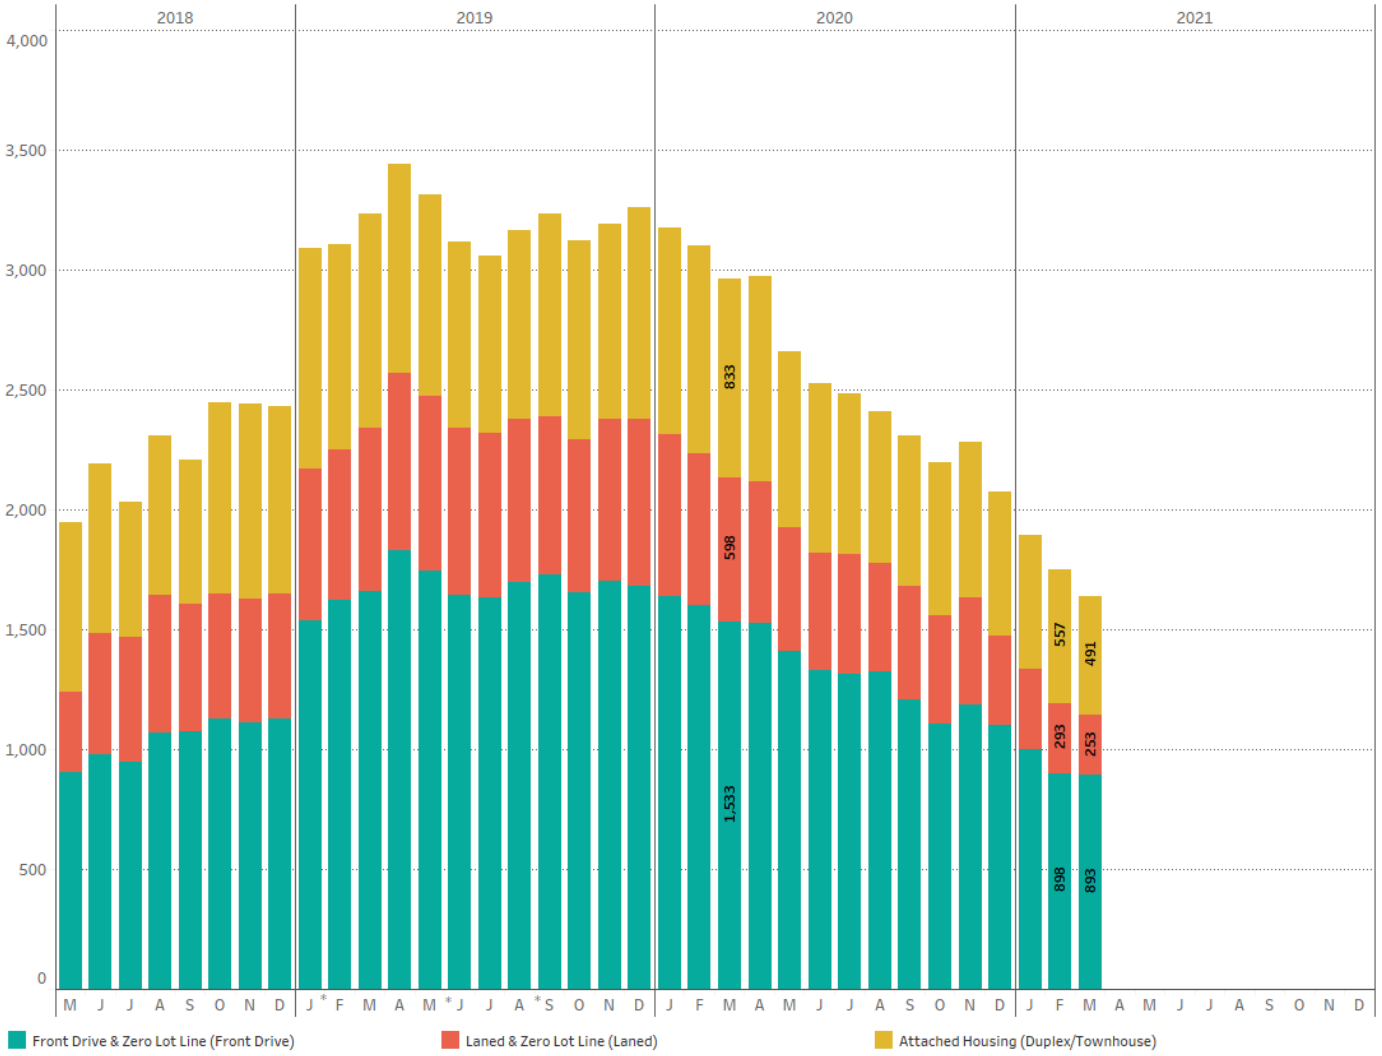


Notes: data may include revisions to previously reported numbers. Due to few projects being reported in the Northwest, Established West, Westend and South Inner City submarkets, these submarkets have been grouped together.

** New builder(s) added.*

Number of Available Lots by Lot/Home Type

Chart represents number of available/unsold lots (incl. serviced lots available for immediate construction) for sale in each month broken down by lot/home type (based on data reported by participating builders).

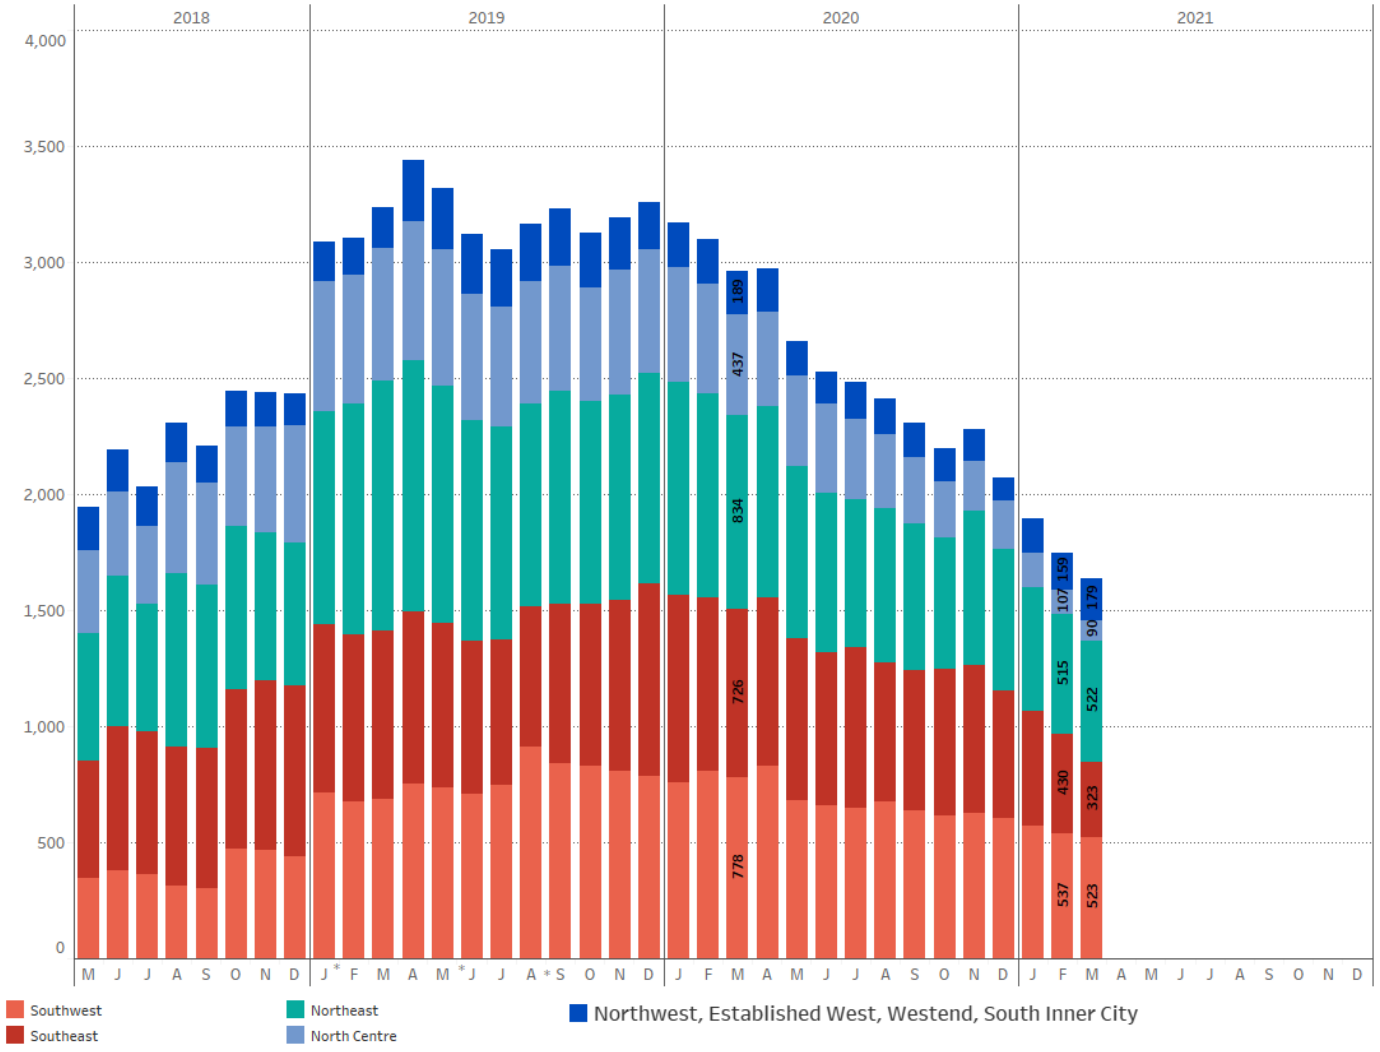


** New builder(s) added.*

Note: data may include revisions to previously reported numbers.

Number of Available Lots by Submarket

Chart represents number of available/unsold lots (incl. serviced lots available for immediate construction) for sale in each month broken down by submarket (based on data reported by participating builders).



Notes: data may include revisions to previously reported numbers. Due to few projects being reported in the Northwest, Established West, Westend and South Inner City submarkets, these submarkets have been grouped together.
